

INVESTMENT OBJECTIVE

The Rutherford Balanced Portfolio's strategy is to provide investors with a well-diversified multi-managed prudential portfolio that aims to produce high long-term total return through diversification of asset managers and investment styles. The portfolio's equity exposure is limited to a maximum of 75% of the portfolio's net asset value. The portfolio will be managed in compliance with the prudential investment guidelines that apply to retirement funds in South Africa (Regulation 28 restrictions).

RISK PROFILE

Low | Low - Moderate

- This portfolio has low to no equity exposure, resulting in low risk, stable investment returns.
- The portfolio is exposed to interest rate risks.
- The portfolio is suitable for short term investment horizons

Moderate | Moderate - High

- This portfolio holds more equity exposure than a low risk portfolio but less than a high-risk portfolio. In turn the expected volatility is higher than a low risk portfolio, but less than a high-risk portfolio. The probability of losses is higher than that of a low risk portfolio, but less than a high-risk portfolio and the expected potential long term investment returns could therefore be lower than a high-risk portfolio due to lower equity exposure, but higher than a low risk portfolio.
- Where the asset allocation contained in this MDD reflects offshore exposure, the portfolio is exposed to currency risks.
- The portfolio is exposed to equity as well as default and interest rate risks.
- Therefore, it is suitable for medium term investment horizons.

High

- This portfolio holds more equity exposure than any other risk profiled portfolio and therefore tends to carry higher volatility due to high exposure to equity markets.
- Expected potential long term returns could be higher than other risk profiles and in turn the risk of potential capital losses is higher.
- Where the asset allocation contained in this MDD reflect offshore exposure, the portfolio is exposed to currency risks.
- Therefore, it is suitable for long term investment horizons.

WRAP PORTFOLIO INFORMATION DOCUMENT | 30 SEPTEMBER 2024

MARKET COMMENTARY

*South African index returns are quoted in rands, all other return figures are quoted in USD terms.

Developed Market Equities continued to deliver strong returns in September (MSCI World Index +1.9% MoM), driven by the Fed's decision to join major central banks in cutting its lending rate. The Fed's larger than anticipated 0.5% cut was particularly important and followed data indicating easing inflation and a slowing labour market. The S&P 500 TR Index returned 2.1% for the month, ending September at an all-time high. US Large-cap stocks outperformed small-cap stocks in September, in line with historical precedents during Fed rate cut cycles. Emerging market stocks comfortably outperformed their DM peers (MSCI EM +6.7% MoM), with Chinese stocks as the primary source of outperformance (MSCI China 23.6% MoM). The Chinese Government added to investor optimism by announcing a raft of monetary and other stimulus measures aimed at helping China's economy overcome a multi-year period of lacklustre growth. Locally, South African Equities (FTSE/JSE All Share Index +4.0% MoM) continued its post-election re-rating as the formation of the Government of National Unity improved investor sentiment while the stimulus measures announced by China gave our local bourse a further boost at month-end. The Reserve Bank (SARB) delivered its first interest rate cut in September since early 2020, reducing the repo rate from 8.25% to 8.00%. The softening global interest rate environment, alongside increasing optimism for SA economic activity, eased the SA government's 10-year borrowing rate towards 10% p.a. at the end of September (FTSE/JSE All Bond Index +3.9% MoM). The rand was the second-best emerging market currency in September, appreciating by 3.1% against the dollar, benefitting from the surprise 50bps US interest rate cut.

DISCLAIMER

Managed by: Rutherford Asset Management (Pty) Ltd. Authorised Financial Service Provider, FSP Number 48213.

The fund allocation (above) indicates the holdings of the model portfolio, also referred to as wrap portfolios. The portfolio holdings are quantitatively and qualitatively assessed on a quarterly basis by the independent investment committee. Where any of the above funds are not available on any particular Linked Investment Service Provider (LISP) platform, an appropriately comparable replacement fund is selected by the investment committee. Due to the possible fund composition variations resulting from such comparable replacements, the actual overall asset allocation, fees and returns may differ across platforms. Periodic portfolio rebalancing is initiated by the investment committee to realign strategic allocations whilst taking specific account of the intended risk and return profiles of the portfolios as well as capital gains tax and cost effects. Past performance is not indicative of future performance and for the historical return purposes above it was assumed that before the launch date of the portfolio, the portfolio's holdings and asset allocation remained static during the entire back tested period. The capital or the return of a portfolio is not guaranteed. A wrap fund is a portfolio consisting of a number of underlying investments wrapped into a single product. Wrap funds are not legal CIS funds of funds as the wrap fund itself is not a collective investment portfolio, but is simply a collection of separate collective investment portfolios and money market accounts. With a wrap fund the investor has direct ownership of the underlying investments. Wrap funds are not regulated by the Collective Investment Schemes Control Act and do not have a separate legal status. They are regulated by the same legislation that applies to Linked Investment Services Providers (LISPs), namely the Stock Exchanges Control Act and the Financial Markets Control Act. Investors should take note that any changes made within a wrap fund can trigger capital gains tax.

The portfolio's performance numbers are based on a master portfolio tracked in the Morningstar Direct system. These performance numbers are net of all underlying managers TER's, but gross of the portfolio management, LISP and advice fees.

FAIS CONFLICT OF INTEREST DISCLOSURE

Please note that your financial advisor has to disclose any conflict of interest as well as all fees received relating to your investment in writing to you.
